Summary

I'm Solomon Ayodele, a qualified software engineer from Lagos, Nigeria, who goes by the online alias "solohcode." I have been developing programs for at least six years, have built, managed, and deployed responsive, fully functional web apps for at least five years, and have worked as a professional software engineer for at least four years for up to four distinct firms.

Over the years, I have developed a number of technical skill sets, including those in HTML, CSS, JavaScript, and TypeScript. libraries for JavaScript like REACTJS, NEXTJS, and VUEJS. tools for state management like REDUX and RECOIL. CSS libraries such as TAILWIND, BOOTSTRAP, and SCSS Tools for UI/UX like WIREFRAME and FIGMA tools for project management like GIT and GitHub. Task management programs like CLICKUP, ASANA, TRELLO and other frontend-related libraries are just a few examples. I've also worked with backend programs like FIREBASE, PHP, and MySQL, and still open to insinuating more knowledge as learning never ends.

I am a technology geek who enjoys discussing everything tech-related, and so far, problem-solving has been my best topic. a confident proponent of evolution, a propagandist for individual and social growth, a student with high learning interest, and a physical and technical deep thinker.

I will proudly refer to myself as an indivual who is very much devoted to his trade because throughout the years I have been able to master various important physiological and technical qualities. a strong communicator, vivacious team player, and growth-conscious team lead, I have had remarkable project management and team-leading experiences throughout my career in the sector.

My passions are more concerned with problem-solving, mind and body growth, travel, and global discovery than my hobbies, which include things like computing, cuisine, listening to music, playing video games, and leisure sports.

do well to check my portfolio whose URL is stated at the top of this resume.

I'm grateful.
